

ANZAP Patient Website Launch

Version 1.0

www.perioinfo.org

Australian & New Zealand
Academy of Periodontists

Our Aim

Provide a separate website for patients

Provide information for patients to understand their periodontal health status and make informed decisions around treatment

Provide a directory for patients to find a periodontist in their local area

Provide our members with a platform they can direct patients to

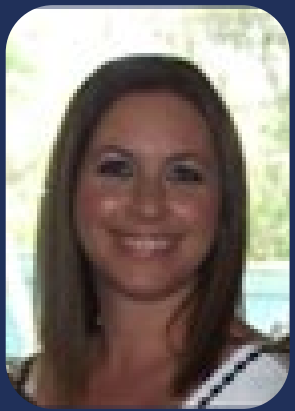

The Project

The project was Chaired by Dr Nick Cole & A/Prof Tino Mercado, involving Kayla Ashkar and ANZAP council members, Prof Ivan Darby, Dr Luan Ngo, Dr Wendy Gill, Dr Kaye Kendall, Dr Andre Bendyk and Dr Tasha Mackie.

Graphics supplied ADA. Special thanks to Dr Kaye Kendall for facilitating this process.

Thank You to the Authors!!

- Soft Tissue Grafting around Implants – A/Prof Mehdi Valizadeh
- Cosmetic and Bite Problems with Dental Implants – Dr Greg Peake
- Dental Radiographs for your Periodontal and Implant Care – A/Prof Louise Brown

All the Resources in One Place

Add www.perioinfo.org links to your website

Learn about Dental Implants

<h3>Dental Implants</h3> <p>You may have heard of dental implants, or your dentist has recommended dental implant treatment to you. Dental implants are widely used in dentistry to replace missing teeth.</p> Read More	<h3>Bone Regeneration on Dental Implants</h3> <p>Bone regeneration around dental implants is achieved by grafting bone. Most commonly bone grafting is required when a patient does not have enough healthy natural bone at the dental implant site to support a dental implant.</p> Read More	<h3>Soft Tissue Grafting Around Implants</h3> <p>When you attend a periodontist for dental implant replacement therapy, the periodontist may recommend soft tissue grafting along with the implant treatment. This may be recommended to be undertaken prior to, at the same time as implant placement or at the time of uncovering of the implant.</p> Read More

Learn about Gum Disease And Health.

<h3>Importance of Good Oral Hygiene</h3> <p>Plaque needs to be removed thoroughly and frequently to prevent formation of calculus (tartar), which once formed cannot be removed with a toothbrush. Professional cleaning is required to remove calculus and plaque on root surfaces where deep pockets may prevent access for oral hygiene devices.</p> Read More	<h3>What are Gum Diseases?</h3> <p>Gum or Periodontal diseases are a wide range of diseases that affect the gums. The most common types of periodontal disease are gingivitis and periodontitis.</p> Read More	<h3>Management of Gum Diseases</h3> <p>If you're told you have periodontal disease, your dentist may propose a range of treatments or refer you to a gum specialist or periodontist for treatment. Depending on your disease severity your periodontist may increase "step up" or decrease "step down" your treatment until your gums are healthy.</p> Read More

Learn about Treatments

<h3>Crown Lengthening Surgeries</h3> <p>Crown lengthening surgery is a procedure that is carried out by your periodontist to expose more tooth structure.</p> Read More	<h3>Regeneration on Teeth</h3> <p>"What's gone is gone" Or is it? Often patients are told that bone loss at teeth is permanent, and nothing can be done to bring it back.</p> Read More	<h3>Orthodontics and Periodontal Health</h3> <p>Gum disease (periodontitis) is caused by the build-up of bacterial plaque on the teeth. Misaligned or crooked teeth can be difficult to clean properly, which may place you at a higher risk of developing gum disease.</p> Read More
